

AggregateRating

A Schema.org Type

Thing › **Intangible** › **Rating** › **AggregateRating**

[\[more...\]](#)

The average rating based on multiple ratings or reviews.

Property	Expected Type	Description
Properties from AggregateRating		
itemReviewed	Thing	The item that is being reviewed/rated.
ratingCount	Integer	The count of total number of ratings.
reviewCount	Integer	The count of total number of reviews.
Properties from Rating		
author	Organization or Person	The author of this content or rating. Please note that author is special in that HTML 5 provides a special mechanism for indicating authorship via the rel tag. That is equivalent to this and may be used interchangeably.

Property	Expected Type	Description
bestRating	Number or Text	The highest value allowed in this rating system.
ratingExplanation	Text	A short explanation (e.g. one to two sentences) providing background context and other information that led to the conclusion expressed in the rating. This is particularly applicable to ratings associated with "fact check" markup using ClaimReview .
ratingValue	Number or Text	The rating for the content. Usage guidelines: • Use values from 0123456789 (Unicode 'DIGIT ZERO' (U+0030) to 'DIGIT NINE' (U+0039)) rather than superficially similar Unicode symbols. • Use '.' (Unicode 'FULL STOP' (U+002E)) rather than ',' to indicate a decimal point. Avoid using these symbols as a readability separator.
reviewAspect	Text	This Review or Rating is relevant to this part or facet of the itemReviewed.
worstRating	Number or Text	The lowest value allowed in this rating system.
Properties from Thing		
additionalType	Text or URL	An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of rdf:type in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an

Property	Expected Type	Description
		appropriate schema to reference. In the case of text values, the class label should follow the schema.org style guide .
alternateName	Text	An alias for the item.
description	Text or TextObject	A description of the item.
disambiguatingDescription	Text	A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.
identifier	PropertyValue or Text or URL	The identifier property represents any kind of identifier for any kind of Thing , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See background notes for more details.
image	ImageObject or URL	An image of the item. This can be a URL or a fully described ImageObject .
mainEntityOfPage	CreativeWork or URL	Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See background notes for details. Inverse property: mainEntity
name	Text	The name of the item.
potentialAction	Action	Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.
sameAs	URL	URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.

Property	Expected Type	Description
subjectOf	CreativeWork or Event	A CreativeWork or Event about this Thing. Inverse property: about
url	URL	URL of the item.

Instances of **AggregateRating** may appear as a value for the following properties

Property	On Types	Description
aggregateRating	Brand or CreativeWork or Event or Offer or Organization or Place or Product or Service	The overall rating, based on a collection of reviews or ratings, of the item.
