

AlignmentObject

A Schema.org Type

Thing > **Intangible** > **AlignmentObject**

[\[more...\]](#)

An intangible item that describes an alignment between a learning resource and a node in an educational framework.

Should not be used where the nature of the alignment can be described using a simple property, for example to express that a resource **teaches** or **assesses** a competency.

Property	Expected Type	Description
Properties from AlignmentObject		
alignmentType	Text	A category of alignment between the learning resource and the framework node. Recommended values include: 'requires', 'textComplexity', 'readingLevel', and 'educationalSubject'.
educationalFramework	Text	The framework to which the resource being described is aligned.
targetDescription	Text	The description of a node in an established educational framework.
targetName	Text	The name of a node in an established educational framework.

Property	Expected Type	Description
targetUrl	URL	The URL of a node in an established educational framework.
Properties from Thing		
additionalType	Text or URL	An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of rdf:type in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an appropriate schema to reference. In the case of text values, the class label should follow the schema.org style guide .
alternateName	Text	An alias for the item.
description	Text or TextObject	A description of the item.
disambiguatingDescription	Text	A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.
identifier	PropertyValue or Text or URL	The identifier property represents any kind of identifier for any kind of Thing , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See background notes for more details.
image	ImageObject or URL	An image of the item. This can be a URL or a fully described ImageObject .
mainEntityOfPage	CreativeWork or	Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See background notes for details.

Property	Expected Type	Description
	URL	Inverse property: mainEntity
name	Text	The name of the item.
potentialAction	Action	Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.
sameAs	URL	URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.
subjectOf	CreativeWork or Event	A CreativeWork or Event about this Thing. Inverse property: about
url	URL	URL of the item.

Instances of **AlignmentObject** may appear as a value for the following properties

Property	On Types	Description
coursePrerequisites	Course	Requirements for taking the Course. May be completion of another Course or a textual description like "permission of instructor". Requirements may be a pre-requisite competency, referenced using AlignmentObject .
educationalAlignment	CreativeWork or LearningResource	An alignment to an established educational framework. This property should not be used where the nature of the alignment can be described using a simple property, for example to express that a resource teaches or assesses a competency.

Property	On Types	Description
programPrerequisites	EducationalOccupationalProgram	Prerequisites for enrolling in the program.
