

# Class

A Schema.org Type

Defined in the *meta* section.

**Thing** › **Intangible** › **Class**

[more...]

A class, also often called a 'Type'; equivalent to `rdfs:Class`.

| Property                     | Expected Type                                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------|-------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Properties from <b>Class</b> |                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>supersededBy</b>          | <b>Class</b> or<br><b>Enumeration</b> or<br><b>Property</b> | Relates a term (i.e. a property, class or enumeration) to one that supersedes it.                                                                                                                                                                                                                                                                                                                                                               |
| Properties from <b>Thing</b> |                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>additionalType</b>        | <b>Text</b> or<br><b>URL</b>                                | An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of <code>rdf:type</code> in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an |

| Property                         | Expected Type                         | Description                                                                                                                                                                                                                                                                                                     |
|----------------------------------|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                  |                                       | appropriate schema to reference. In the case of text values, the class label should follow the schema.org <a href="#">style guide</a> .                                                                                                                                                                         |
| <b>alternateName</b>             | Text                                  | An alias for the item.                                                                                                                                                                                                                                                                                          |
| <b>description</b>               | Text or<br>TextObject                 | A description of the item.                                                                                                                                                                                                                                                                                      |
| <b>disambiguatingDescription</b> | Text                                  | A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.                                                                    |
| <b>identifier</b>                | PropertyValue<br>or<br>Text or<br>URL | The identifier property represents any kind of identifier for any kind of <b>Thing</b> , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See <a href="#">background notes</a> for more details. |
| <b>image</b>                     | ImageObject or<br>URL                 | An image of the item. This can be a <a href="#">URL</a> or a fully described <b>ImageObject</b> .                                                                                                                                                                                                               |
| <b>mainEntityOfPage</b>          | CreativeWork<br>or<br>URL             | Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See <a href="#">background notes</a> for details.<br>Inverse property: <b>mainEntity</b>                                                                                                                      |
| <b>name</b>                      | Text                                  | The name of the item.                                                                                                                                                                                                                                                                                           |
| <b>potentialAction</b>           | Action                                | Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.                                                                                                                                                                                              |
| <b>sameAs</b>                    | URL                                   | URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.                                                                                                                                                   |

| Property         | Expected Type                             | Description                                                                 |
|------------------|-------------------------------------------|-----------------------------------------------------------------------------|
| <b>subjectOf</b> | <b>CreativeWork</b><br>or<br><b>Event</b> | A CreativeWork or Event about this Thing.<br>Inverse property: <b>about</b> |
| <b>url</b>       | <b>URL</b>                                | URL of the item.                                                            |

Instances of **Class** may appear as a value for the following properties

| Property              | On Types                                                         | Description                                                                                                                                          |
|-----------------------|------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>domainIncludes</b> | <b>Property</b>                                                  | Relates a property to a class that is (one of) the type(s) the property is expected to be used on.                                                   |
| <b>populationType</b> | <b>StatisticalPopulation</b><br>or<br><b>StatisticalVariable</b> | Indicates the populationType common to all members of a <b>StatisticalPopulation</b> or all cases within the scope of a <b>StatisticalVariable</b> . |
| <b>rangeIncludes</b>  | <b>Property</b>                                                  | Relates a property to a class that constitutes (one of) the expected type(s) for values of the property.                                             |
| <b>supersededBy</b>   | <b>Class</b> or<br><b>Enumeration</b> or<br><b>Property</b>      | Relates a term (i.e. a property, class or enumeration) to one that supersedes it.                                                                    |
