

DigitalPlatformEnumeration

A Schema.org Enumeration Type

This term is in the "new" area - implementation feedback and adoption from applications and websites can help improve our definitions.

Thing > **Intangible** > **Enumeration** > **DigitalPlatformEnumeration**

[\[more...\]](#)

Enumerates some common technology platforms, for use with properties such as **actionPlatform**. It is not supposed to be comprehensive - when a suitable code is not enumerated here, textual or URL values can be used instead. These codes are at a fairly high level and do not deal with versioning and other nuance. Additional codes can be suggested [in github](#).

Instances of **DigitalPlatformEnumeration** may appear as a value for the following properties

Property	On Types	Description
actionPlatform	EntryPoint	The high level platform(s) where the Action can be performed for the given URL. To specify a specific application or operating system instance, use actionApplication.
