

GeospatialGeometry

A Schema.org Type

This term is in the "new" area - implementation feedback and adoption from applications and websites can help improve our definitions.

Thing › **Intangible** › **GeospatialGeometry**

[\[more...\]](#)

(Eventually to be defined as) a supertype of GeoShape designed to accommodate definitions from Geo-Spatial best practices.

Property	Expected Type	Description
Properties from GeospatialGeometry		
geoContains	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a containing geometry to a contained geometry. "a contains b iff no points of b lie in the exterior of a, and at least one point of the interior of b lies in the interior of a". As defined in DE-9IM .
geoCoveredBy	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a geometry to another that covers it. As defined in DE-9IM .

Property	Expected Type	Description
geoCovers	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a covering geometry to a covered geometry. "Every point of b is a point of (the interior or boundary of) a". As defined in DE-9IM .
geoCrosses	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a geometry to another that crosses it: "a crosses b: they have some but not all interior points in common, and the dimension of the intersection is less than that of at least one of them". As defined in DE-9IM .
geoDisjoint	GeospatialGeometry or Place	Represents spatial relations in which two geometries (or the places they represent) are topologically disjoint: "they have no point in common. They form a set of disconnected geometries." (A symmetric relationship, as defined in DE-9IM .)
geoEquals	GeospatialGeometry or Place	Represents spatial relations in which two geometries (or the places they represent) are topologically equal, as defined in DE-9IM . "Two geometries are topologically equal if their interiors intersect and no part of the interior or boundary of one geometry intersects the exterior of the other" (a symmetric relationship).
geoIntersects	GeospatialGeometry or Place	Represents spatial relations in which two geometries (or the places they represent) have at least one point in common. As defined in DE-9IM .
geoOverlaps	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a geometry to another that geospatially overlaps it, i.e. they have some but not all points in common. As defined in DE-9IM .
geoTouches	GeospatialGeometry or	Represents spatial relations in which two geometries (or the places they represent) touch: "they have at least one boundary point in common, but no

Property	Expected Type	Description
geoWithin	Place	interior points." (A symmetric relationship, as defined in DE-9IM .)
	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a geometry to one that contains it, i.e. it is inside (i.e. within) its interior. As defined in DE-9IM .
Properties from Thing		
additionalType	Text or URL	An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of rdf:type in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an appropriate schema to reference. In the case of text values, the class label should follow the schema.org style guide .
alternateName	Text	An alias for the item.
description	Text or TextObject	A description of the item.
disambiguatingDescription	Text	A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.
identifier	PropertyValue or Text or URL	The identifier property represents any kind of identifier for any kind of Thing , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See background notes for more details.

Property	Expected Type	Description
image	ImageObject or URL	An image of the item. This can be a URL or a fully described ImageObject .
mainEntityOfPage	CreativeWork or URL	Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See background notes for details. Inverse property: mainEntity
name	Text	The name of the item.
potentialAction	Action	Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.
sameAs	URL	URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.
subjectOf	CreativeWork or Event	A CreativeWork or Event about this Thing. Inverse property: about
url	URL	URL of the item.

Instances of **GeospatialGeometry** may appear as a value for the following properties

Property	On Types	Description
geoContains	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a containing geometry to a contained geometry. "a contains b iff no points of b lie in the exterior of a, and at least one point of the interior of b lies in the interior of a". As defined in DE-9IM .

Property	On Types	Description
geoCoveredBy	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a geometry to another that covers it. As defined in DE-9IM .
geoCovers	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a covering geometry to a covered geometry. "Every point of b is a point of (the interior or boundary of) a". As defined in DE-9IM .
geoCrosses	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a geometry to another that crosses it: "a crosses b: they have some but not all interior points in common, and the dimension of the intersection is less than that of at least one of them". As defined in DE-9IM .
geoDisjoint	GeospatialGeometry or Place	Represents spatial relations in which two geometries (or the places they represent) are topologically disjoint: "they have no point in common. They form a set of disconnected geometries." (A symmetric relationship, as defined in DE-9IM .)
geoEquals	GeospatialGeometry or Place	Represents spatial relations in which two geometries (or the places they represent) are topologically equal, as defined in DE-9IM . "Two geometries are topologically equal if their interiors intersect and no part of the interior or boundary of one geometry intersects the exterior of the other" (a symmetric relationship).
geoIntersects	GeospatialGeometry or Place	Represents spatial relations in which two geometries (or the places they represent) have at least one point in common. As defined in DE-9IM .
geoOverlaps	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a geometry to another that geospatially overlaps it, i.e. they have some but not all points in common. As defined in DE-9IM .

Property	On Types	Description
geoTouches	GeospatialGeometry or Place	Represents spatial relations in which two geometries (or the places they represent) touch: "they have at least one boundary point in common, but no interior points." (A symmetric relationship, as defined in DE-9IM .)
geoWithin	GeospatialGeometry or Place	Represents a relationship between two geometries (or the places they represent), relating a geometry to one that contains it, i.e. it is inside (i.e. within) its interior. As defined in DE-9IM .
