

MonetaryAmount

A Schema.org Type

Thing > **Intangible** > **StructuredValue** > **MonetaryAmount**

[\[more...\]](#)

A monetary value or range. This type can be used to describe an amount of money such as \$50 USD, or a range as in describing a bank account being suitable for a balance between £1,000 and £1,000,000 GBP, or the value of a salary, etc. It is recommended to use **PriceSpecification** Types to describe the price of an Offer, Invoice, etc.

Property	Expected Type	Description
Properties from MonetaryAmount		
currency	Text	The currency in which the monetary amount is expressed. Use standard formats: ISO 4217 currency format , e.g. "USD"; Ticker symbol for cryptocurrencies, e.g. "BTC"; well known names for Local Exchange Trading Systems (LETS) and other currency types, e.g. "Ithaca HOUR".
maxValue	Number	The upper value of some characteristic or property.
minValue	Number	The lower value of some characteristic or property.

Property	Expected Type	Description
validFrom	Date or DateTime	The date when the item becomes valid.
validThrough	Date or DateTime	The date after when the item is not valid. For example the end of an offer, salary period, or a period of opening hours.
value	Boolean or Number or StructuredValue or Text	The value of a QuantitativeValue (including Observation) or property value node. - For QuantitativeValue and MonetaryAmount, the recommended type for values is 'Number'. - For PropertyValue, it can be 'Text', 'Number', 'Boolean', or 'StructuredValue'. - Use values from 0123456789 (Unicode 'DIGIT ZERO' (U+0030) to 'DIGIT NINE' (U+0039)) rather than superficially similar Unicode symbols. - Use '.' (Unicode 'FULL STOP' (U+002E)) rather than ',' to indicate a decimal point. Avoid using these symbols as a readability separator.
Properties from Thing		
additionalType	Text or URL	An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of rdf:type in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an appropriate schema to reference. In the case of text values, the class label should follow the schema.org style guide .

Property	Expected Type	Description
alternateName	Text	An alias for the item.
description	Text or TextObject	A description of the item.
disambiguatingDescription	Text	A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.
identifier	PropertyValue or Text or URL	The identifier property represents any kind of identifier for any kind of Thing , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See background notes for more details.
image	ImageObject or URL	An image of the item. This can be a URL or a fully described ImageObject .
mainEntityOfPage	CreativeWork or URL	Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See background notes for details. Inverse property: mainEntity
name	Text	The name of the item.
potentialAction	Action	Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.
sameAs	URL	URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.

Property	Expected Type	Description
subjectOf	CreativeWork or Event	A CreativeWork or Event about this Thing. Inverse property: about
url	URL	URL of the item.

Instances of **MonetaryAmount** may appear as a value for the following properties

Property	On Types	Description
accountMinimumInflow	BankAccount	A minimum amount that has to be paid in every month.
accountOverdraftLimit	BankAccount	An overdraft is an extension of credit from a lending institution when an account reaches zero. An overdraft allows the individual to continue withdrawing money even if the account has no funds in it. Basically the bank allows people to borrow a set amount of money.
amount	DatedMoneySpecification or InvestmentOrDeposit or LoanOrCredit or MonetaryGrant or MoneyTransfer	The amount of money.
baseSalary	EmployeeRole or JobPosting	The base salary of the job or of an employee in an EmployeeRole.

Property	On Types	Description
customerRemorseReturnShippingFeesAmount	MerchantReturnPolicy	The amount of shipping costs if a product is returned due to customer remorse. Applicable when property customerRemorseReturnFees equals ReturnShippingFees .
downPayment	RepaymentSpecification	a type of payment made in cash during the onset of the purchase of an expensive good/service. The payment typically represents only a percentage of the full purchase price.
earlyPrepaymentPenalty	RepaymentSpecification	The amount to be paid as a penalty in the event of early payment of the loan.
estimatedCost	HowTo or HowToSupply	The estimated cost of the supply or supplies consumed when performing instructions.
estimatedSalary	JobPosting or Occupation	An estimated salary for a job posting or occupation, based on a variety of variables including, but not limited to industry, job title, and location. Estimated salaries are often computed by outside organizations rather than the hiring organization, who may not have committed to the estimated value.

Property	On Types	Description
exchangeRateSpread	ExchangeRateSpecification	The difference between the price at which a broker or other intermediary buys and sells foreign currency.
floorLimit	PaymentCard	A floor limit is the amount of money above which credit card transactions must be authorized.
freeShippingThreshold	ShippingRateSettings	A monetary value above (or at) which the shipping rate becomes free. Intended to be used via an OfferShippingDetails with shippingSettingsLink matching this ShippingRateSettings .
hasTierRequirement	MemberProgramTier	A requirement for a user to join a membership tier, for example: a CreditCard if the tier requires sign up for a credit card, A UnitPriceSpecification if the user is required to pay a (periodic) fee, or a MonetaryAmount if the user needs to spend a minimum amount to join the tier. If a tier is free to join then this property does not need to be specified.
itemDefectReturnShippingFeesAmount	MerchantReturnPolicy	Amount of shipping costs for defect product returns. Applicable when

Property	On Types	Description
		property itemDefectReturnFees equals ReturnShippingFees .
loanMortgageMandateAmount	MortgageLoan	Amount of mortgage mandate that can be converted into a proper mortgage at a later stage.
loanPaymentAmount	RepaymentSpecification	The amount of money to pay in a single payment.
minimumPaymentDue	Invoice	The minimum payment required at this time.
monthlyMinimumRepaymentAmount	PaymentCard	The minimum payment is the lowest amount of money that one is required to pay on a credit card statement each month.
netWorth	Person	The total financial value of the person as calculated by subtracting assets from liabilities.
restockingFee	MerchantReturnPolicy or MerchantReturnPolicySeasonalOverride	Use MonetaryAmount to specify a fixed restocking fee for product returns, or use Number to specify a percentage of the product price paid by the customer.
returnShippingFeesAmount	MerchantReturnPolicy or MerchantReturnPolicySeasonalOverride	Amount of shipping costs for product returns (for any reason). Applicable

Property	On Types	Description
		when property returnFees equals ReturnShippingFees .
shippingRate	OfferShippingDetails or ShippingRateSettings	The shipping rate is the cost of shipping to the specified destination. Typically, the maxValue and currency values (of the MonetaryAmount) are most appropriate.
totalPaymentDue	Invoice	The total amount due.
Supersedes		
DatedMoneySpecification
