

Occupation

A Schema.org Type

Thing > **Intangible** > **Occupation**

[\[more...\]](#)

A profession, may involve prolonged training and/or a formal qualification.

Property	Expected Type	Description
Properties from Occupation		
educationRequirements	EducationalOccupationalCredential or Text	Educational background needed for the position or Occupation.
estimatedSalary	MonetaryAmount or MonetaryAmountDistribution or Number	An estimated salary for a job posting or occupation, based on a variety of variables including, but not limited to industry, job title, and location. Estimated salaries are often computed by outside organizations rather than the hiring organization, who may not have committed to the estimated value.
experienceRequirements	OccupationalExperienceRequirements or	Description of skills and experience needed for the position or Occupation.

Property	Expected Type	Description
occupationLocation	Text	
	AdministrativeArea	The region/country for which this occupational description is appropriate. Note that educational requirements and qualifications can vary between jurisdictions.
occupationalCategory	CategoryCode or Text	A category describing the job, preferably using a term from a taxonomy such as BLS O*NET-SOC , ISCO-08 or similar, with the property repeated for each applicable value. Ideally the taxonomy should be identified, and both the textual label and formal code for the category should be provided.
		Note: for historical reasons, any textual label and formal code provided as a literal may be assumed to be from O*NET-SOC.
qualifications	EducationalOccupationalCredential or Text	Specific qualifications required for this role or Occupation.
responsibilities	Text	Responsibilities associated with this role or Occupation.
skills	DefinedTerm or Text	A statement of knowledge, skill, ability, task or any other assertion expressing a competency that is either claimed by a person, an organization or desired or required to fulfill a role or to work in an occupation.
Properties from Thing		

Property	Expected Type	Description
additionalType	Text or URL	An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of rdf:type in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an appropriate schema to reference. In the case of text values, the class label should follow the schema.org style guide .
alternateName	Text	An alias for the item.
description	Text or TextObject	A description of the item.
disambiguatingDescription	Text	A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.
identifier	PropertyValue or Text or URL	The identifier property represents any kind of identifier for any kind of Thing , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See background notes for more details.

Property	Expected Type	Description
image	ImageObject or URL	An image of the item. This can be a URL or a fully described ImageObject .
mainEntityOfPage	CreativeWork or URL	Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See background notes for details. Inverse property: mainEntity
name	Text	The name of the item.
potentialAction	Action	Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.
sameAs	URL	URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.
subjectOf	CreativeWork or Event	A CreativeWork or Event about this Thing. Inverse property: about
url	URL	URL of the item.

Instances of **Occupation** may appear as a value for the following properties

Property	On Types	Description
hasOccupation	Person	The Person's occupation. For past professions, use Role for expressing dates.
relevantOccupation	JobPosting	The Occupation for the JobPosting.
