

OpeningHoursSpecification

A Schema.org Type

Thing › **Intangible** › **StructuredValue** › **OpeningHoursSpecification**

[\[more...\]](#)

A structured value providing information about the opening hours of a place or a certain service inside a place.

The place is **open** if the **opens** property is specified, and **closed** otherwise.

If the value for the **closes** property is less than the value for the **opens** property then the hour range is assumed to span over the next day.

Property	Expected Type	Description
Properties from OpeningHoursSpecification		
closes	Time	The closing hour of the place or service on the given day(s) of the week.
dayOfWeek	DayOfWeek	The day of the week for which these opening hours are valid.
opens	Time	The opening hour of the place or service on the given day(s) of the week.
validFrom	Date or DateTime	The date when the item becomes valid.

Property	Expected Type	Description
validThrough	Date or DateTime	The date after when the item is not valid. For example the end of an offer, salary period, or a period of opening hours.
Properties from Thing		
additionalType	Text or URL	An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of <code>rdf:type</code> in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an appropriate schema to reference. In the case of text values, the class label should follow the schema.org style guide .
alternateName	Text	An alias for the item.
description	Text or TextObject	A description of the item.
disambiguatingDescription	Text	A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.
identifier	PropertyValue or Text or URL	The identifier property represents any kind of identifier for any kind of Thing , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See background notes for more details.
image	ImageObject or URL	An image of the item. This can be a URL or a fully described ImageObject .

Property	Expected Type	Description
mainEntityOfPage	CreativeWork or URL	Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See background notes for details. Inverse property: mainEntity
name	Text	The name of the item.
potentialAction	Action	Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.
sameAs	URL	URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.
subjectOf	CreativeWork or Event	A CreativeWork or Event about this Thing. Inverse property: about
url	URL	URL of the item.

Instances of **OpeningHoursSpecification** may appear as a value for the following properties

Property	On Types	Description
businessDays	ShippingDeliveryTime	Days of the week when the merchant typically operates, indicated via opening hours markup.
hoursAvailable	ContactPoint or LocationFeatureSpecification or Service	The hours during which this service or contact is available.

Property	On Types	Description
openingHoursSpecification	Place	The opening hours of a certain place.
	Place	The special opening hours of a certain place.
specialOpeningHoursSpecification		Use this to explicitly override general opening hours brought in scope by openingHoursSpecification or openingHours .

Acknowledgements

GoodRelations Vocabulary Classes

This class is derived from the GoodRelations Vocabulary for E-Commerce, created by Martin Hepp. GoodRelations is a data model for sharing e-commerce data on the Web that can be expressed in a variety of syntaxes, including RDFa and HTML5 Microdata. More information about GoodRelations can be found at <http://purl.org/goodrelations/>.
