

ShippingRateSettings

A Schema.org Type

Thing > **Intangible** > **StructuredValue** > **ShippingRateSettings**

[\[more...\]](#)

A ShippingRateSettings represents re-usable pieces of shipping information. It is designed for publication on an URL that may be referenced via the **shippingSettingsLink** property of an **OfferShippingDetails**. Several occurrences can be published, distinguished and matched (i.e. identified/referenced) by their different values for **shippingLabel**.

Property	Expected Type	Description
Properties from ShippingRateSettings		
doesNotShip	Boolean	Indicates when shipping to a particular shippingDestination is not available.
freeShippingThreshold	DeliveryChargeSpecification or MonetaryAmount	A monetary value above (or at) which the shipping rate becomes free. Intended to be used via an OfferShippingDetails with shippingSettingsLink matching this ShippingRateSettings .
isUnlabelledFallback	Boolean	This can be marked 'true' to indicate that some published DeliveryTimeSettings or ShippingRateSettings are intended to apply to all OfferShippingDetails published by the

Property	Expected Type	Description
		same merchant, when referenced by a shippingSettingsLink in those settings. It is not meaningful to use a 'true' value for this property alongside a transitTimeLabel (for DeliveryTimeSettings) or shippingLabel (for ShippingRateSettings), since this property is for use with unlabelled settings.
shippingDestination	DefinedRegion	indicates (possibly multiple) shipping destinations. These can be defined in several ways, e.g. postalCode ranges.
shippingLabel	Text	Label to match an OfferShippingDetails with a ShippingRateSettings (within the context of a shippingSettingsLink cross-reference).
shippingRate	MonetaryAmount	The shipping rate is the cost of shipping to the specified destination. Typically, the maxValue and currency values (of the MonetaryAmount) are most appropriate.
Properties from Thing		
additionalType	Text or URL	An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of rdf:type in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an appropriate schema to reference. In the case of text values, the class label should follow the schema.org style guide.

Property	Expected Type	Description
alternateName	Text	An alias for the item.
description	Text or TextObject	A description of the item.
disambiguatingDescription	Text	A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.
identifier	PropertyValue or Text or URL	The identifier property represents any kind of identifier for any kind of Thing , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See background notes for more details.
image	ImageObject or URL	An image of the item. This can be a URL or a fully described ImageObject .
mainEntityOfPage	CreativeWork or URL	Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See background notes for details. Inverse property: mainEntity
name	Text	The name of the item.
potentialAction	Action	Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.

Property	Expected Type	Description
sameAs	URL	URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.
subjectOf	CreativeWork or Event	A CreativeWork or Event about this Thing. Inverse property: about
url	URL	URL of the item.
