

SizeSpecification

A Schema.org Enumeration Type

This term is in the "new" area - implementation feedback and adoption from applications and websites can help improve our definitions.

Thing > **Intangible** > **Enumeration** > **QualitativeValue** > **SizeSpecification**

[\[more...\]](#)

Size related properties of a product, typically a size code (**name**) and optionally a **sizeSystem**, **sizeGroup**, and product measurements (**hasMeasurement**). In addition, the intended audience can be defined through **suggestedAge**, **suggestedGender**, and suggested body measurements (**suggestedMeasurement**).

Property	Expected Type	Description
Properties from SizeSpecification		
hasMeasurement	QuantitativeValue	A measurement of an item, For example, the inseam of pants, the wheel size of a bicycle, the gauge of a screw, or the carbon footprint measured for certification by an authority. Usually an exact measurement, but can also be a range of measurements for adjustable products, for example belts and ski bindings.

Property	Expected Type	Description
sizeGroup	SizeGroupEnumeration or Text	The size group (also known as "size type") for a product's size. Size groups are common in the fashion industry to define size segments and suggested audiences for wearable products. Multiple values can be combined, for example "men's big and tall", "petite maternity" or "regular".
sizeSystem	SizeSystemEnumeration or Text	The size system used to identify a product's size. Typically either a standard (for example, "GS1" or "ISO-EN13402"), country code (for example "US" or "JP"), or a measuring system (for example "Metric" or "Imperial").
suggestedAge	QuantitativeValue	The age or age range for the intended audience or person, for example 3-12 months for infants, 1-5 years for toddlers.
suggestedGender	GenderType or Text	The suggested gender of the intended person or audience, for example "male", "female", or "unisex".
suggestedMeasurement	QuantitativeValue	A suggested range of body measurements for the intended audience or person, for example inseam between 32 and 34 inches or height between 170 and 190 cm. Typically found on a size chart for wearable products.
Properties from QualitativeValue		
additionalProperty	PropertyValue	A property-value pair representing an additional characteristic of the entity, e.g. a product feature or another characteristic for which there is no matching property in schema.org. Note: Publishers should be aware that applications designed to use specific schema.org properties (e.g. https://schema.org/width,

Property	Expected Type	Description
		https://schema.org/color, https://schema.org/gtin13, ...) will typically expect such data to be provided using those properties, rather than using the generic property/value mechanism.
equal	QualitativeValue	This ordering relation for qualitative values indicates that the subject is equal to the object.
greater	QualitativeValue	This ordering relation for qualitative values indicates that the subject is greater than the object.
greaterOrEqual	QualitativeValue	This ordering relation for qualitative values indicates that the subject is greater than or equal to the object.
lesser	QualitativeValue	This ordering relation for qualitative values indicates that the subject is lesser than the object.
lesserOrEqual	QualitativeValue	This ordering relation for qualitative values indicates that the subject is lesser than or equal to the object.
nonEqual	QualitativeValue	This ordering relation for qualitative values indicates that the subject is not equal to the object.

Property	Expected Type	Description
valueReference	DefinedTerm or Enumeration or MeasurementTypeEnumeration or PropertyValue or QualitativeValue or QuantitativeValue or StructuredValue or Text	A secondary value that provides additional information on the original value, e.g. a reference temperature or a type of measurement.
Properties from Enumeration		
supersededBy	Class or Enumeration or Property	Relates a term (i.e. a property, class or enumeration) to one that supersedes it.
Properties from Thing		
additionalType	Text or URL	An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of <code>rdf:type</code> in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an appropriate schema to reference. In the case of text values, the class label should follow the schema.org style guide .
alternateName	Text	An alias for the item.

Property	Expected Type	Description
description	Text or TextObject	A description of the item.
disambiguatingDescription	Text	A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.
identifier	PropertyValue or Text or URL	The identifier property represents any kind of identifier for any kind of Thing , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See background notes for more details.
image	ImageObject or URL	An image of the item. This can be a URL or a fully described ImageObject .
mainEntityOfPage	CreativeWork or URL	Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See background notes for details. Inverse property: mainEntity
name	Text	The name of the item.
potentialAction	Action	Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.
sameAs	URL	URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.

Property	Expected Type	Description
subjectOf	CreativeWork or Event	A CreativeWork or Event about this Thing. Inverse property: about
url	URL	URL of the item.

Instances of **SizeSpecification** may appear as a value for the following properties

Property	On Types	Description
size	CreativeWork or Product	A standardized size of a product or creative work, specified either through a simple textual string (for example 'XL', '32Wx34L'), a QuantitativeValue with a unitCode, or a comprehensive and structured SizeSpecification ; in other cases, the width , height , depth and weight properties may be more applicable.
