

StructuredValue

A Schema.org Type

Thing › **Intangible** › **StructuredValue**

[\[more...\]](#)

Structured values are used when the value of a property has a more complex structure than simply being a textual value or a reference to another thing.

Property	Expected Type	Description
Properties from Thing		
additionalType	Text or URL	An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of <code>rdf:type</code> in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an appropriate schema to reference. In the case of text values, the class label should follow the schema.org style guide .
alternateName	Text	An alias for the item.
description	Text or TextObject	A description of the item.

Property	Expected Type	Description
disambiguatingDescription	Text	A sub property of description. A short description of the item used to disambiguate from other, similar items. Information from other properties (in particular, name) may be necessary for the description to be useful for disambiguation.
identifier	PropertyValue or Text or URL	The identifier property represents any kind of identifier for any kind of Thing , such as ISBNs, GTIN codes, UUIDs etc. Schema.org provides dedicated properties for representing many of these, either as textual strings or as URL (URI) links. See background notes for more details.
image	ImageObject or URL	An image of the item. This can be a URL or a fully described ImageObject .
mainEntityOfPage	CreativeWork or URL	Indicates a page (or other CreativeWork) for which this thing is the main entity being described. See background notes for details. Inverse property: mainEntity
name	Text	The name of the item.
potentialAction	Action	Indicates a potential Action, which describes an idealized action in which this thing would play an 'object' role.
sameAs	URL	URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.
subjectOf	CreativeWork or Event	A CreativeWork or Event about this Thing. Inverse property: about
url	URL	URL of the item.

Instances of **StructuredValue** may appear as a value for the following properties

Property	On Types	Description
numberOfCredits	Course or EducationalOccupationalProgram	The number of credits or units awarded by a Course or required to complete an EducationalOccupationalProgram.
typicalCreditsPerTerm	EducationalOccupationalProgram	The number of credits or units a full-time student would be expected to take in 1 term however 'term' is defined by the institution.
value	MonetaryAmount or PropertyValue or QuantitativeValue	The value of a QuantitativeValue (including Observation) or property value node. - For QuantitativeValue and MonetaryAmount, the recommended type for values is 'Number'. - For PropertyValue, it can be 'Text', 'Number', 'Boolean', or 'StructuredValue'. - Use values from 0123456789 (Unicode 'DIGIT ZERO' (U+0030) to 'DIGIT NINE' (U+0039)) rather than superficially similar Unicode symbols. - Use '.' (Unicode 'FULL STOP' (U+002E)) rather than ',' to indicate a decimal point. Avoid using these symbols as a readability separator.
valueReference	PropertyValue or QualitativeValue or QuantitativeValue	A secondary value that provides additional information on the original value, e.g. a reference temperature or a type of measurement.
