

# URL

A Schema.org Type

**DataType** › **Text** › **URL**

[\[more...\]](#)

Data type: URL.

Instances of **URL** may appear as a value for the following properties

| Property                   | On Types                 | Description                                                                                                                                                                         |
|----------------------------|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>acceptsReservations</b> | <b>FoodEstablishment</b> | Indicates whether a FoodEstablishment accepts reservations. Values can be Boolean, an URL at which reservations can be made or (for backwards compatibility) the strings Yes or No. |
| <b>acquireLicensePage</b>  | <b>CreativeWork</b>      | Indicates a page documenting how licenses can be purchased or otherwise acquired, for the current item                                                                              |
| <b>actionPlatform</b>      | <b>EntryPoint</b>        | The high level platform(s) where the Action can be performed for the given URL. To specify a specific application or operating system instance, use actionApplication.              |

| Property                        | On Types                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------|-----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>actionableFeedbackPolicy</b> | <b>NewsMediaOrganization</b> or <b>Organization</b> | For a <b>NewsMediaOrganization</b> or other news-related <b>Organization</b> , a statement about public engagement activities (for news media, the newsroom's), including involving the public - digitally or otherwise -- in coverage decisions, reporting and activities after publication.                                                                                                                                                                                                                                                                              |
| <b>additionalType</b>           | <b>Thing</b>                                        | An additional type for the item, typically used for adding more specific types from external vocabularies in microdata syntax. This is a relationship between something and a class that the thing is in. Typically the value is a URI-identified RDF class, and in this case corresponds to the use of rdf:type in RDF. Text values can be used sparingly, for cases where useful information can be added without their being an appropriate schema to reference. In the case of text values, the class label should follow the <a href="#">schema.org style guide</a> . |
| <b>afterMedia</b>               | <b>HowToDirection</b>                               | A media object representing the circumstances after performing this direction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>applicationCategory</b>      | <b>SoftwareApplication</b>                          | Type of software application, e.g. 'Game, Multimedia'.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>applicationSubCategory</b>   | <b>SoftwareApplication</b>                          | Subcategory of the application, e.g. 'Arcade Game'.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>archivedAt</b>               | <b>CreativeWork</b>                                 | Indicates a page or other link involved in archival of a <b>CreativeWork</b> . In the case of <b>MediaReview</b> , the item in a <b>MediaReviewItem</b> may often become inaccessible but be archived by archival, journalistic, activist, or law                                                                                                                                                                                                                                                                                                                          |

| Property         | On Types                                              | Description                                                                                                                                                                                                                                                                                             |
|------------------|-------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>artMedium</b> |                                                       | enforcement organizations. In such cases, the referenced page may not directly publish the content                                                                                                                                                                                                      |
|                  | <b>VisualArtwork</b>                                  | The material used. (E.g. Oil, Watercolour, Acrylic, Linoprint, Marble, Cyanotype, Digital, Lithograph, DryPoint, Intaglio, Pastel, Woodcut, Pencil, Mixed Media etc.)                                                                                                                                   |
|                  | <b>artform</b>                                        | e.g. Painting, Drawing, Sculpture, Print, Photograph, Assemblage, Collage, etc.                                                                                                                                                                                                                         |
|                  | <b>artworkSurface</b>                                 | The supporting materials for the artwork, e.g. Canvas Paper, Wood, Board, etc.                                                                                                                                                                                                                          |
| <b>asin</b>      | <b>Demand</b> or<br><b>Offer</b> or<br><b>Product</b> | An Amazon Standard Identification Number (ASIN) is 10-character alphanumeric unique identifier assigned by Amazon.com and its partners for product identification within the Amazon organization (summary from <a href="#">Wikipedia's</a> article).                                                    |
|                  |                                                       | Note also that this is a definition for how to include ASINs in Schema.org data, and not a definition of ASINs in general - see documentation from Amazon for authoritative details. ASINs are most commonly encoded as text strings, but the [asin] property supports URL/URI as potential values too. |

| Property                  | On Types                                                                                                                                                                                                                                                         | Description                                                                                                                                                                  |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>associatedDisease</b>  | <a href="#">BioChemEntity</a>                                                                                                                                                                                                                                    | Disease associated to this BioChemEntity. Such disease can be a MedicalCondition or a URL. If you want to add evidence supporting the association, please use PropertyValue. |
| <b>bankAccountType</b>    | <a href="#">BankAccount</a>                                                                                                                                                                                                                                      | The type of a bank account.                                                                                                                                                  |
| <b>beforeMedia</b>        | <a href="#">HowToDirection</a>                                                                                                                                                                                                                                   | A media object representing the circumstances before performing this direction.                                                                                              |
| <b>benefitsSummaryUrl</b> | <a href="#">HealthInsurancePlan</a>                                                                                                                                                                                                                              | The URL that goes directly to the summary of benefits and coverage for the specific standard plan or plan variation.                                                         |
| <b>bodyType</b>           | <a href="#">Vehicle</a>                                                                                                                                                                                                                                          | Indicates the design and body style of the vehicle (e.g. station wagon, hatchback, etc.).                                                                                    |
| <b>category</b>           | <a href="#">ActionAccessSpecification</a> or <a href="#">Invoice</a> or <a href="#">Offer</a> or <a href="#">PhysicalActivity</a> or <a href="#">Product</a> or <a href="#">Recommendation</a> or <a href="#">Service</a> or <a href="#">SpecialAnnouncement</a> | A category for the item. Greater signs or slashes can be used to informally indicate a category hierarchy.                                                                   |
| <b>childTaxon</b>         | <a href="#">Taxon</a>                                                                                                                                                                                                                                            | Closest child taxa of the taxon in question.                                                                                                                                 |

| <b>material</b>             | <b>CreativeWork</b> or <b>Product</b>                                                                                                   | A material that something is made from, e.g. leather, wool, cotton, paper.                                                                                                                                                                                                                                                                                                            |
| <b>measurementMethod</b>    | <b>DataCatalog</b> or <b>DataDownload</b> or <b>Dataset</b> or <b>Observation</b> or <b>PropertyValue</b> or <b>StatisticalVariable</b> | A subproperty of <b>measurementTechnique</b> that can be used for specifying specific methods, in particular via <b>MeasurementMethodEnum</b> .                                                                                                                                                                                                                                       |
| <b>measurementTechnique</b> | <b>DataCatalog</b> or <b>DataDownload</b> or <b>Dataset</b> or <b>Observation</b> or <b>PropertyValue</b> or <b>StatisticalVariable</b> | A technique, method or technology used in an <b>Observation</b> , <b>StatisticalVariable</b> or <b>Dataset</b> ( <b>DataDownload</b> , <b>DataCatalog</b> ), corresponding to the method used for measuring the corresponding variable(s) (for datasets, described using <b>variableMeasured</b> ; for <b>Observation</b> , a <b>StatisticalVariable</b> ). Often but not necessarily |

## Property

## On Types

## Description

each **variableMeasured** will have an explicit representation as (or mapping to) an property such as those defined in Schema.org, or other RDF vocabularies and "knowledge graphs". In that case the subproperty **variableMeasured** called **measuredProperty** is applicable.

The **measurementTechnique** property helps when an clarification is needed about how a **measuredProperty** was measured. This is oriented towards scientific and scholarly dataset publication but may have broader applicability; it is not intended as a full representation of measurement, but can often serve as a high level summary for dataset discovery.

For example, if **variableMeasured** is: molecule concentration, **measurementTechnique** could be: "mass spectrometry" or "nmr spectroscopy" or "colorimetry" or "immunofluorescence". If the **variableMeasured** is "depression rating", the **measurementTechnique** could be "Zung Scale" or "HAM-D" or "Beck Depression Inventory".

If there are several **variableMeasured** properties recorded for some given data object, use a **PropertyValue** for each **variableMeasured** and attach the corresponding **measurementTechnique**. The value can also be from an enumeration, organized as a **MeasurementMethodEnumeration**.

Standards bodies should promote a standard prefix for the identifiers of properties from their standards.</p>                                                                                                         |
| <b>publicTransportClosuresInfo</b> | <b>SpecialAnnouncement</b>                                  | Information about public transport closures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>publishingPrinciples</b>        | <b>CreativeWork</b> or <b>Organization</b> or <b>Person</b> | <p>The publishingPrinciples property indicates (typically <b>URL</b>) a document describing the editorial principles of <b>Organization</b> (or individual, e.g. a <b>Person</b> writing a blog) that relate to their activities as a publisher, e.g. ethics or diversity policies. When applied to a <b>CreativeWork</b> (e.g. <b>NewsArticle</b>) the principles are those of the party primarily responsible for the creation of the <b>CreativeWork</b>.</p> <p>While such policies are most typically expressed in natural language, sometimes related information (e.g. indicating a <b>funder</b>) can be expressed using schema.org terminology.</p> |
| <b>quarantineGuidelines</b>        | <b>SpecialAnnouncement</b>                                  | Guidelines about quarantine rules, e.g. in the context of a pandemic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Property             | On Types                   | Description                                                                                                                                                                                                                                                                                                   |
|----------------------|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>relatedLink</b>   | <b>WebPage</b>             | A link related to this web page, for example to other related web pages.                                                                                                                                                                                                                                      |
| <b>releaseNotes</b>  | <b>SoftwareApplication</b> | Description of what changed in this version.                                                                                                                                                                                                                                                                  |
| <b>replyToUrl</b>    | <b>UserComments</b>        | The URL at which a reply may be posted to the specific UserComment.                                                                                                                                                                                                                                           |
| <b>requirements</b>  | <b>SoftwareApplication</b> | Component dependency requirements for application. This includes runtime environments and shared libraries that are not included in the application distribution package, but required to run the application (example DirectX, Java or .NET runtime).                                                        |
| <b>roleName</b>      | <b>Role</b>                | A role played, performed or filled by a person or organization. For example, the team of creators for a comic book might fill the roles named 'inker', 'penciller' and 'letterer'; or an athlete in a SportsTeam might play the position named 'Quarterback'.                                                 |
| <b>sameAs</b>        | <b>Thing</b>               | URL of a reference Web page that unambiguously indicates the item's identity. E.g. the URL of the item's Wikipedia page, Wikidata entry, or official website.                                                                                                                                                 |
| <b>schemaVersion</b> | <b>CreativeWork</b>        | Indicates (by URL or string) a particular version of a schema used in some CreativeWork. This property was created primarily to indicate the use of a specific schema.org release, e.g. <b>10.0</b> as a simple string, or more explicitly via URL,<br><code>https://schema.org/docs/releases.html#v10</code> |

| Property                            | On Types                                                              | Description                                                                                                                                                                                                                                                                                                         |

| <b>significantLink</b>      | <b>WebPage</b>                   | One of the more significant URLs on the page. Typically these are the non-navigation links that are clicked on the most.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>significantLinks</b>     | <b>WebPage</b>                   | The most significant URLs on the page. Typically, these are the non-navigation links that are clicked on the most.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>softwareRequirements</b> | <b>SoftwareApplication</b>       | Component dependency requirements for application. This includes runtime environments and shared libraries that are not included in the application distribution package, but required to run the application (example: DirectX, Java or .NET runtime).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>speakable</b>            | <b>Article</b> or <b>WebPage</b> | <p>Indicates sections of a Web page that are particularly 'speakable' in the sense of being highlighted as being especially appropriate for text-to-speech conversion. Other sections of a page may also be usefully spoken in particular circumstances; the 'speakable' property serves to indicate the parts most likely to be generally useful for speech.</p> <p>The <i>speakable</i> property can be repeated an arbitrary number of times, with three kinds of possible 'content locator' values:</p> <p>1.) <i>id-value</i> URL references - uses <i>id-value</i> of an element in the page being annotated. The simplest use of <i>speakable</i> has (potentially relative) URL values, referencing identified sections of the document concerned.</p> |

| Property                   | On Types                                        | Description                                                                                                                                                                                                                                                                                                                                  |
|----------------------------|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                            |                                                 | 2.) CSS Selectors - addresses content in the annotat page, e.g. via class attribute. Use the <b>cssSelector</b> property.                                                                                                                                                                                                                    |
|                            |                                                 | 3.) XPaths - addresses content via XPaths (assuming XML view of the content). Use the <b>xpath</b> property.                                                                                                                                                                                                                                 |
|                            |                                                 | For more sophisticated markup of speakable sections beyond simple ID references, either CSS selectors or XPath expressions to pick out document section(s) a speakable. For this we define a supporting type, <b>SpeakableSpecification</b> which is defined to be a possible value of the <i>speakable</i> property.                        |
| <b>sport</b>               | <b>SportsEvent</b> or <b>SportsOrganization</b> | A type of sport (e.g. Baseball).                                                                                                                                                                                                                                                                                                             |
| <b>statType</b>            | <b>StatisticalVariable</b>                      | Indicates the kind of statistic represented by a <b>StatisticalVariable</b> , e.g. mean, count etc. The value of statType is a property, either from within Schema.org (e.g. <b>median</b> , <b>marginOfError</b> , <b>maxValue</b> , <b>minValue</b> ) or from other compatible (e.g. RDF) systems such as DataCommons.org or Wikidata.org. |
| <b>storageRequirements</b> | <b>SoftwareApplication</b>                      | Storage requirements (free space required).                                                                                                                                                                                                                                                                                                  |
| <b>surface</b>             | <b>VisualArtwork</b>                            | A material used as a surface in some artwork, e.g. Canvas, Paper, Wood, Board, etc.                                                                                                                                                                                                                                                          |

| Property                | On Types        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>target</b>           | Action          | Indicates a target EntryPoint, or url, for an Action.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>targetUrl</b>        | AlignmentObject | The URL of a node in an established educational framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>taxonRank</b>        | Taxon           | The taxonomic rank of this taxon given preferably as a URI from a controlled vocabulary – typically the ranks from TDWG TaxonRank ontology or equivalent Wikidata URIs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>taxonomicRange</b>   | BioChemEntity   | The taxonomic grouping of the organism that expresses, encodes, or in some way related to the BioChemEntity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>temporalCoverage</b> | CreativeWork    | <p>The temporalCoverage of a CreativeWork indicates the period that the content applies to, i.e. that it describes either as a DateTime or as a textual string indicating a time period in <b>ISO 8601 time interval format</b>. In the case of a Dataset it will typically indicate the relevant time period in a precise notation (e.g. for a 2011 census dataset, the year 2011 would be written "2011/2012"). Other forms of content, e.g. ScholarlyArticle, Book, TVSeries or TVEpisode, may indicate their temporalCoverage in broader terms - textually or via well-known URL. Written works such as books may sometimes have precise temporal coverage too, e.g. a work set in 1939 - 1945 can be indicated in ISO 8601 interval format format via "1939/1945".</p> <p>Open-ended date ranges can be written with ".." in place of the end date. For example, "2015-11/.." indicates a</p> |
